

Nayax Contactless Payment Terminal for ITS CL3

Introducing the Nayax Contactless Payment Terminal for the ITS CL3 Value Loader

The Nayax Contactless Payment Terminal running on the ITS CL3 offers your customers the flexibility to pay for their printing and copying any way they choose. Not every potential customer will have cash on them nowadays so by offering cashless payment you will be providing them with a convenient way of topping up their account which is safe and secure.

The Nayax terminal processes the credit card (contactless) payment and authorisation of the transaction. The ITS CL3 is connected to the Nayax terminal via MDB (Vending) communications and therefore will only see the balance from the Nayax terminal (Pre-Authorised) and then sends this to "add" in PaperCut. The ITS CL3 in terms of PaperCut does not see the card details as the process is entirely handled by the Nayax terminal.

Supported Payment Schemes

- MasterCard PayPass Mag Stripe+ M/Chip
- Visa PayWave MSD + qVSDC
- ApplePay and Android Pay

Technical Information

- Interface communication - RS232 up to 115,200 kbps
