INTRODUCING m3i

m3i is a fully customisable embedded solution developed for Ricoh Multi-Functional Devices integrating with PaperCut MF. m3i facilitates access to multiple functions from a single interface without the need to install separate scanning applications.

Scanning options include scan to me, scan to email (using a favourites list or LDAP lookup), scan to home folder and scan to Google Docs. More advanced features include forced client billing, scanning to document management solutions and options for customised billing connectors.

m3i provides a simplified workflow and a seamless process for both users and administrators. With our continual commitment to providing solutions to help our customers m3i offers an alternative embedded option in Ricoh controlled environments.

There are a number of user interface options depending on the functionality you require, please refer to the solution comparison overleaf.
