Requirements

Operating System

- Linux distribution supported by .NET Core 3.1 (list on <https://docs.microsoft.com/en-us/dotnet/core/install/linux>)
- 40 GB of hard driver
- 4 GB of ram

Components

- You will need to download and install dotnet-runtime-6.0.x and aspnetcore-runtime- 6.0.x.
- A Link to the package is provided below:

<https://docs.microsoft.com/en-us/dotnet/core/install/linux>

Firewall and Network

- You need to open on your firewall and network port 12120.

Certificate

- If you want to run the DocSlide portal using HTTPS, the administrator needs to create a certificate for the server's DNS name and upload it for further use.

Installation Procedure

Installation of Microsoft Net Core (depends on distribution, below description valid for Ubuntu Server 18.04 LTS)

1. Add Microsoft signing keys into trusted keys store:

```
wget  
https://packages.microsoft.com/config/ubuntu/18.04/packages-  
microsoft-prod.deb -O packages-microsoft-prod.deb  
  
sudo dpkg -i packages-microsoft-prod.deb
```

2. Update package list with root privileges

```
sudo apt-get update
```

3. Install package allowing HTTPS transport of updates for apt:

```
sudo apt-get install -y apt-transport-https
```

4. Update package list with root privileges one again

```
sudo apt-get update
```

5. Install required packages:

```
sudo apt-get install -y dotnet-runtime-6.0.x  
sudo apt-get install -y aspnetcore-runtime-6.0.x
```

Preparing the System

1. Add *docslide* user with home folder in */opt/docslide*

```
useradd -m -d /opt/docslide docslide
```

2. Install zip package (for convenience)

```
sudo apt-get install zip
```

folder is preferred, any changes may result in need of manual changes in *docslide.service*

Installation of DocSlide Application

1. Copy Docslide archive to home folder of *docslide* user (ex. using *scp*, form Windows PowerShell)
2. Switch to *docslide* user to perform extraction of the archive.

```
sudo su - docslide
```

3. Extract archive into home folder of docslide user and add executable attribute to qllp.ScanService file:

```
unzip DocSlide_<version>_linux-x64.zip
chmod +x qllp.ScanService
```

4. Logout from docslide user's context

```
exit
```

5. Create SystemD service by copying docslide.service file to /etc/systemd/system

```
sudo cp /opt/docslide/docslide.service /etc/systemd/system
```

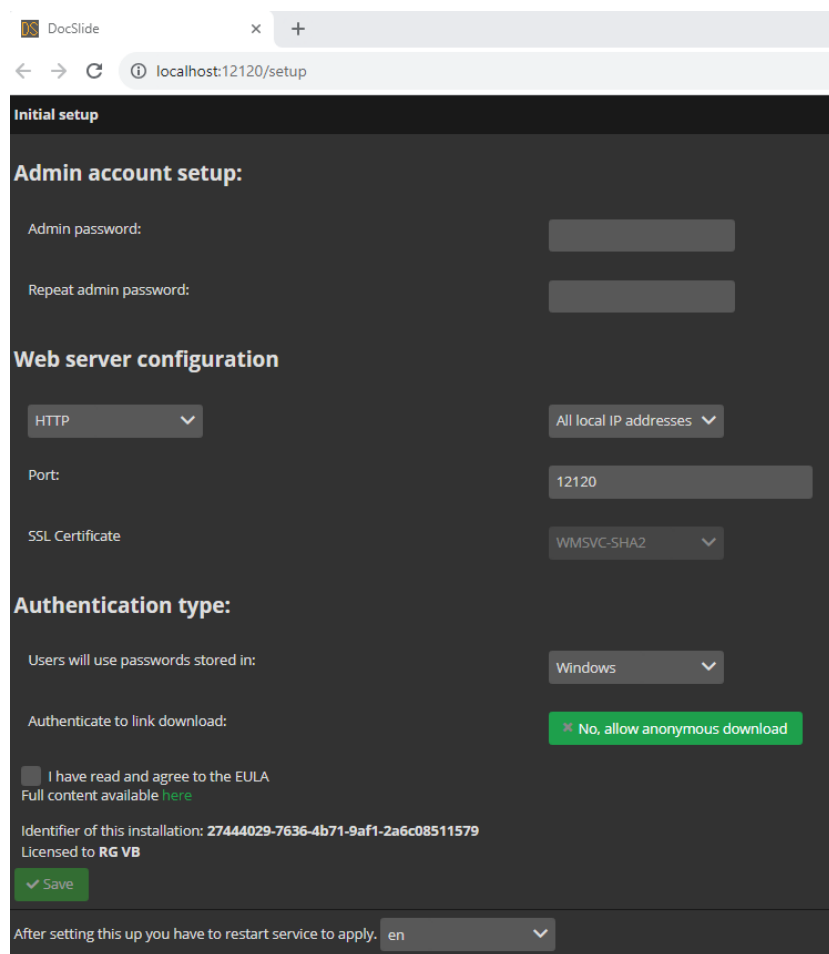

6. Refresh SystemD service daemon, enable and start daemon

```
sudo systemctl daemon-reload
sudo systemctl enable docslide.service
sudo service docslide start
```

7. Check that daemon is running with:

```
sudo service docslide status
```

8. Go to browser and open the DocSlide initial wizard: <http://<server ip>:12120>

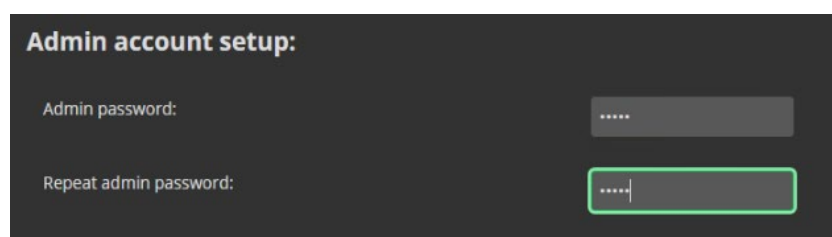

The screenshot shows a web browser window with the address bar displaying 'localhost:12120/setup'. The page title is 'Initial setup'. The interface is divided into three main sections:

- Admin account setup:** Contains two password input fields labeled 'Admin password:' and 'Repeat admin password:'.
- Web server configuration:** Contains several dropdown menus: 'HTTP' (set to HTTP), 'All local IP addresses', 'Port:' (set to 12120), and 'SSL Certificate' (set to WMSVC-SHA2).
- Authentication type:** Contains a dropdown for 'Users will use passwords stored in:' (set to Windows) and a green button labeled 'No, allow anonymous download' next to the 'Authenticate to link download:' label. Below this is a checkbox for 'I have read and agree to the EULA' with a link 'Full content available here'. At the bottom of this section, it shows the installation identifier '27444029-7636-4b71-9af1-2a6c08511579' and 'Licensed to RG VB'. A green 'Save' button is at the bottom left.

At the very bottom, there is a note: 'After setting this up you have to restart service to apply.' followed by a language dropdown menu set to 'en'.

Admin Account Setup

Here you can set password for admin account

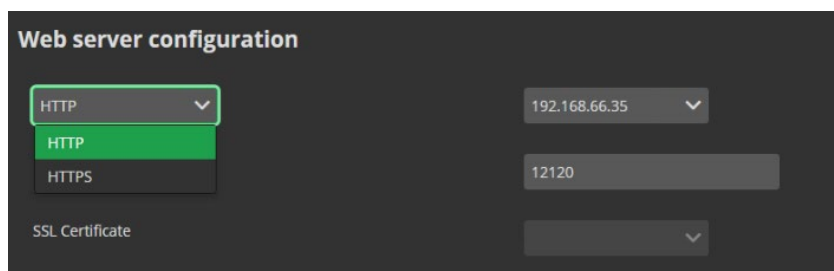

This close-up screenshot focuses on the 'Admin account setup' section. It shows two password input fields. The first field is labeled 'Admin password:' and the second is labeled 'Repeat admin password:'. Both fields contain masked characters (dots). The 'Repeat admin password:' field is highlighted with a green border.

Web Server Configuration

Here you can set or use:

- How portal will be available via http or https
- IP address which DocSlide will use if there are more than one
- Port number which DocSlide will use
- Certificate of the server for https communication (need to be create before by admin for DNS name of the server)

Authentication Type

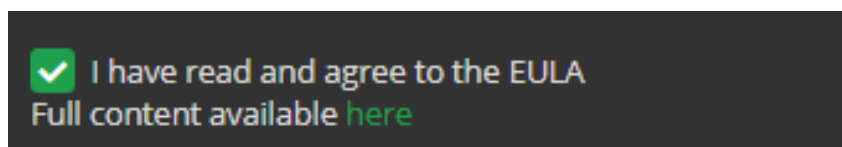

Here you can set, from where DocSlide will check passwords for user's authentication. In case of Windows – Integrated Windows Authentication will be used:

- Windows
- LDAP
- PaperCut

Eula confirmation

Here you need to read DocSlide Eula and confirm that you agree with it.

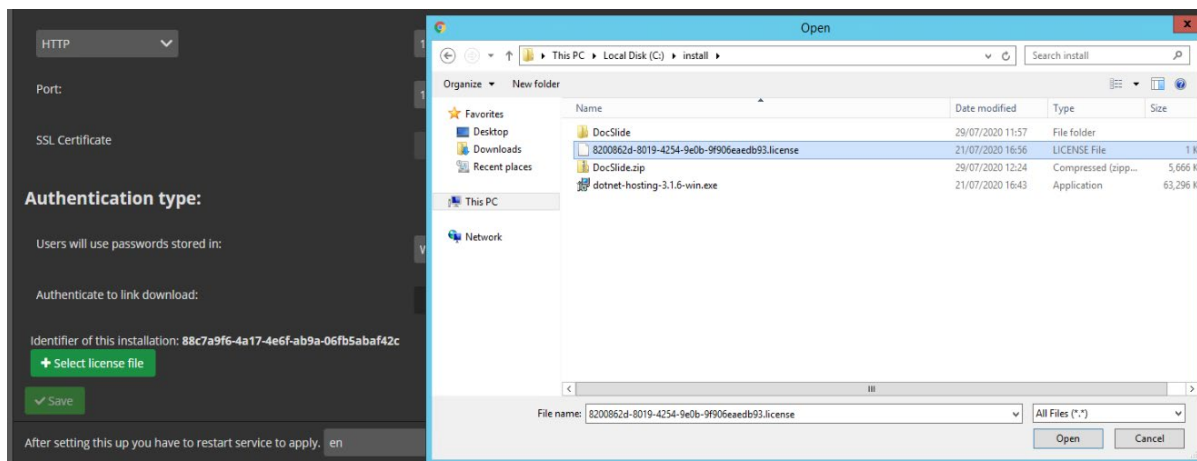

License Activation

Copy the server guide and send it via email at EMAIL ADDRESS ITS for license generation. An example guide is shown below:

When you will shortly receive your licence file, select it and save in any folder. After that you need to select it via installation wizard and save it.

Language Selection

You select language

Restart DocSlide Service

After pressing save you need to restart DocSlide daemon by running commands:

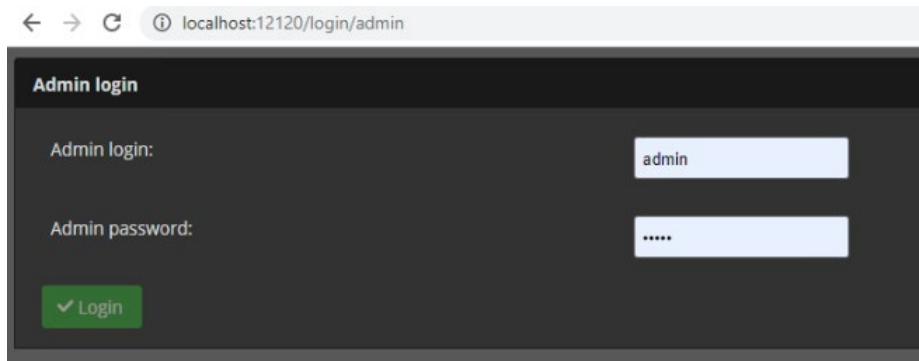

```
sudo service docslide stop
sudo service docslide start
```

Logging On to the DocSlide Admin Portal

To login as admin to DocSlide portal go to browser and open:

<http://localhost://12120/login/admin>

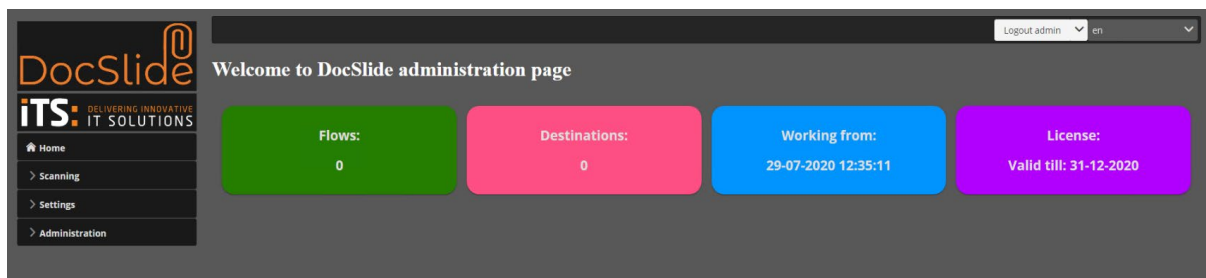

or <https://localhost://12120/login/admin> depends what you configure.

You will be logged to portal as admin user and you need to change it to Admin Portal

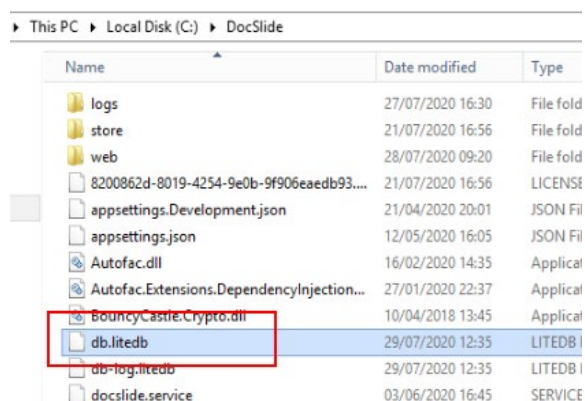

After that you should see DocSlide Admin Portal

Congratulation, good job, DocSlide is installed and you can start playing with configuration 😊

Backup and Recovery

For backup and recovery, you need to store DocSlide database and file *internal.dat* file from *store* subfolder in safe place. This will give you possibility to restore system in a minute. You can find DocSlide database here, folder *store* is available in the root folder of DocSlide:

This PC > Local Disk (C:) > DocSlide
