CM4000 Coin Control Unit

Introducing the CM4000 Coin Control Unit

The CM4000 coin operated control unit attaches to any photocopier to control walk-up, self service photocopying output. It is compact and reliable, making it the ideal choice for offices, education environments, libraries and retail outlets. It will control and reduce paper output with the additional benefit of generating income. It is simple to use, flexible and robust.

How does it work?

The photocopier is 'locked out' until the user inserts coins into the CM4000. The number of copies are then calculated and displayed on the unit. The CM4000 then counts down each time a copy is taken and updates the display accordingly.

Product Features

Features include:

- 2 levels of discount prices
- Accepts 8 different coins
- Supplied with a key allowing free copies
- Designed to be connected to any photocopier
- Standard printer link, to enable capture of statistics
- Manages 4 formats, according to the make of photocopier
- Supplied with its own free standing pedestal, enabling the coin control unit to be placed at the optimum height for users, staff and the photocopier service technician

Settings

The various function keys on the CM4000 allow the administrator to view the following statistics:-

- Cumulative turnover
- Number of copies made for each format
- Selling prices

An optional printer is available to produce these in hard copy format if required.

Optional Items

- An optional lockable cover for the cash box is available, to assist with extra security where required
- P200 printer
